Session 2861 Abstract

Dozens of tough questions and great answers appear daily on the IBM-MAIN mail list, but some seem to keep returning. Attend this session to learn the answers to both the common and especially interesting questions, which have been asked and answered on IBM-MAIN and other popular s390 mailing lists. In the past such questions have included:

- How do I move a link list library without an IPL?
- How do I determine the contents of a tape?
- How do I modify my system to allow me to LOGON to multiple systems with the same userid?
- Why am I getting message IEA602I and running out of ASIDs?

A tutorial on reading and optionally participating in the IBM-MAIN forum will be provided. The speaker will also cover what's new and exciting in MVS freeware and MVS web resources. MVS freeware CBT tapes (3480 cartridges) and CD-ROMs will be handed out to attendees which include the latest CBT Tape V432 and also copies of MVS 3.8J, VM/370 R6, MVT, Hercules 370/390 emulator and LOTS more!

Agenda

- Introduction
- A few Issues & Answers
- Free Software Update
- Mailing List Tutorial, Tips, and Common Lists
- Handout Tapes & CD-ROM(s)
- Q&A

Dynamic Link List Rebuild

If a link list library (non-PDSE) takes a new extent you will begin to get failures fetching modules from that extent. You can active a different Inklst set that has the same data sets as the first to recover from this. You cannot active the same Inklst set.

So:

```
SETPROG LNKLST DEFINE NAME(NEWONE)  
COPYFROM(CURRENT)  
SETPROG LNKLST ACTIVATE NAME(NEWONE)  
SETPROG LNKLST UPDATE JOB(*)
```

Do keep in mind that LNKLST UPDATE JOB(*) might cause problems. This is documented.

Session Boston 2855 Long Beach 2826 “Stop Those Unnecessary IPLs - The Dynamic OS/390 Functions” by Steve Schunk provides tutorial level coverage on this and other Dynamic Functions

Remove a link list library

It is now possible to remove a link list library from use to move it if you need to. Using more steps you can move a link list library to a new volume using either it's current data set name or a new name.

```
stop LLA i.e. P LLA
SETPROG LNKLST DEFINE NAME(NEW) COPYFROM(CURRENT)
SETPROG LNKLST DELETE NAME(NEW) DSN(xxx.OLD)
SETPROG LNKLST ACTIVATE NAME(NEW)
SETPROG LNKLST UPDATE JOB(*)
```

Do keep in mind that LNKLST UPDATE JOB(*) might cause problems. This is documented

```
restart LLA i.e. S LLA,SUB=MSTR,LLA=00
```

Caveat: This won't allow you to vary a volume off-line if the link list library was included at IPL time. The volume is marked permanently resident in the UCB.

LOGON TSO more than 1 system

How to I modify my system to allow me to LOGON to multiple systems with the same userid?

```
IKJ56425I LOGON rejected, UserId CSSJK already  
logged on to system PROD  
IKJ56400A ENTER LOGON OR LOGOFF-
```

- GRS or CA-MIM/MII enqueue handling of SYSIKJUA/userid

For GRS check GR SRNL00 you may have a statement like this causing you to propagate SYSIKJUA sysplex wide.

```
RNLDEF RNL(INCL) TYPE(GENERIC)  
QNAME(SYSIKJUA)
```

LOGON TSO more than 1 system

- JES2 MAS considerations HASPCNVT simple USERMOD or Exit 44 required if you wish to do this in a MAS
- JES3 complex considerations USERMOD to IATGRJS required
- ISPF data sets PROFILE, ISPF LIST, LOG, ISPCTL, and ISPWK.

PROFILE can be allocated differently on each system. How you do it depends on your needs. Other ISPF data sets can be addressed in ISPF Exits.

IBM Item RTA000089663 documents and provides sample code

Mark Zelden provides nice samples in his CBT Tape file 434 which is included on the CD in the /adhoc directory

ASID Exhaustion & IEA602I

**IEA602I ADDRESS SPACE CREATE
FAILED. MAXUSERS WOULD HAVE BEEN EXCEEDED**

An ASID is nothing more than control blocks. MVS sometimes marks ASID as unuseable to preserve integrity. APAR II08563 explains this in great detail.

IEF352I ADDRESS SPACE UNAVAILABLE
is normal and unavoidable in limited quantities

IEASYSxx has some parameters that control how many slots are allocated and placed in reserve for ASID(s).

ASID Exhaustion & IEA602I

ASVT control block influenced by these IEASYSxx parameters

- RSVNONR slots reserved to replace slots marked non-reusable. Default is 5 way to low 512 or 1000 is more reasonable.
- RSVSTRT slots reserved for address spaces created in response to a START command.
- MAXUSERS in conjunction with RSVNONR and RSVSTRT limits the maximum concurrently active tasks.

Don't set these too high it consumes real storage and may cause overhead or storage issues with IBM or OEM software.

The sum of all three cannot exceed 32767

The documentation in MVS Initialization and Tuning Reference covers all this very well.

Tools to help diagnose ASID loss

- SHOWMVS R627 of SHOWMVS will display summary information and also cross memory connections which will help you understand these relationships.
- REXX Bob Lamerand IBM-MAIN posting number 93236 provided a simple REXX exec to display current summary information
- MXI The next release of MXI will include full screen report of the lost slots and associated jobs with MDQ command.
- IPCS On OS/390 R3 and above you can
Get SVC dump of PCAUTH address space (asid 2)
In IPCS issue the command:
**runc addr(cvt+364%+138?) link(x'88') exec((l x+48?+1c len(8)
asid(2) char)) nodisplay**
This should give a list of jobnames you may want to investigate

How to locate a module

- ISRDDN Member command, Inklst command. ISRDDN now included on all supported OS/390 releases
- TASID is a Super-Set of ISRDDN
- ISRFIND ISPF has a nice little 'feature / Level2 Diagnostic Aid' try : TSO ISRFIND ISRFIND is located in ISP.SISPEXEC if you want to look at it.

Note: You can use a module in TSO or an exec without knowing where it is. CALL *(SORT)

Is the mainframe dead?

No! This is a recurring question on IBM-MAIN

Craig Mullins made a relevant posts and provides a web page on this web site about this with a short article

http://www.craigsmullins.com/cnr_mf.htm

From a Gartner Group report titled "IBM Mainframe Scenario and Residual Value Forecast" "The S/390 will remain a significant platform within the enterprise data center" .. "It will remain the best general-purpose system as characterized by high-availability high-security, high-volume"

To see Craig's complete post subscribe to IBM-MAIN and then send this command to

LISTSERV@bama.ua.edu **GETPOST IBM-MAIN 113760**

PDSE

- **IBM Redpiece** Partitioned Data Set Extended Usage Guide at <http://www.redbooks.ibm.com/redpieces/pdfs/sq246106.pdf> answers almost any question about PDSE
- PDSE not new first introduced in MVS/DFP 3.2 but were SMS only
- Non-SMS PDSE(s) are new and APAR II1221 provides the latest information
- APAR OW41815 provides new commands for diagnosis
- IEC143I rc 213-70 check PARMLIB IGDSMSxx's PDSESHARING (NORMAL/EXTENDED)
- Considerations for GRS and CA-MIM/MII SYSZIGW0 and SYSZIGW1 enqueues must be sysplex wide. This is done automatically on OS/390 and z/OS by GRS.

PDS Search & Replace with IPOUPDTE and CPPUPDTE

- Not part of OS/390 or DFSMS
- Included with IPO and ServerPac
- Utilities and documentation come from IBM
- USER modifications available to eliminate annoyances

You can find documentation on-line for the CPPUPDTE (IPOUPDTE) program here

<http://www.s390.ibm.com/os390/installation/cppupdte.html>

PDS Search & Replace with IPOUPDTE and CPPUPDTE

IPO012 DATASET NOT APPLICABLE TO IPOUPDTE

IPOUPDTE and CPPUPDTE have a requirement that an IBM Copyright Statement member \$\$\$COIBM exists in the PDS you want to use them on. A small modification to remove this requirement is show below. Modification thanks to Sam Golob, J Janco, and Thierry FALISSARD.

*

```
NAME  CPPUPDTE
VER   055A 0A12      SVC   18      BLDL OR FIND
VER   055C 12FF      LTR   15,15    CHECK RETURN
VER   055E 4780,C56E  BZ                ..... PROCESS
REP   055E 47F0,C56E  B                FORCE PROCESS.....
```

*

```
* SPZAP TO REMOVE REQUIREMENT THAT A '$$$COIBM' MEMBER
* BE THE FIRST ONE IN THE PDS TO BE SCANNED.
*   J JANCO   13 MARCH 1986
```

*

```
NAME  IPOUPDTE
VER   0548 0A12      SVC   18      BLDL OR FIND
VER   054A 12FF      LTR   15,15    CHECK RETURN
VER   054C 4780,C55C  BZ                ..... PROCESS
REP   054C 47F0,C55C  B                FORCE PROCESS.....
```

~~\$\$\$COIBM~~

See the same at Thierry's IPOUPDTE page at <http://os390-mvs.hypermart.net/ipoupdte.htm>

RC 00 is good... Right?

```
//jobcard
//* EXECUTE FTP IN BATCH
//FTP EXEC PGM=FTP,PARM='198.17.57.67 (EXIT'
//SYSPRINT DD SYSOUT=*
//* testcase.boulder.ibm.com = 198.17.57.67
//* also known as testcase.software.ibm.com
//SYSIN DD *
anonymous sknutson@landmark.com
cd /mvs/toibm
binary
PUT 'CSSJK.DUMP1.PACKED' pmr32162.dump1.packed
PUT 'CSSJK.DUMP2.PACKED' pmr32162.dump2.packed
quit
/*
```

How to get real FTP RC

IBM FTP will set a job step return code of 00 regardless of what happens.

If you code this on your EXEC statement, you will be able to detect if the transmission is no good:

```
EXEC PGM=FTP,PARM='(EXIT=0016'
```

Documented in "OS/390 eNetwork
Communications Server IP User's Guide"

Compress dumps before FTP

- If you send dumps to IBM using FTP be sure and get the compression utility TRSMAIN from <ftp://service.boulder.ibm.com/s390/mvs/tools/packlib> which will allow you to send PACKed dumps that transmit faster and use less space on IBM's FTP directory.
- TRSMAIN is easy to install following the directions and easy to execute. It uses a lot of CPU to PACK a dump but the resulting file is much smaller and will transfer quicker and use less space in the IBM FTP directory.

Compress dumps before FTP

```
//*****
//*
//*          TRSMAN WITH PACK OPTION
//*
//*****
//JOB LIB   DD      DISP=SHR,DSN=CSSJK.TERSE409.LOADLIB
//STEP          EXEC  PGM=TRSMAN,PARM=PACK,TIME=1439
//SYS PRINT   DD      SYSOUT=*
//INFILE      DD      DISP=SHR,DSN=CSSJK.PROD.CONSOLE.DUMP2
//OUTFILE     DD
          DISP=(NEW,CATLG),UNIT=SYSDA,VOL=SER=DMPAC1,
//              DSN=CSSJK.DUMP2.PACKED,
//              SPACE=(CYL,(1000,150),RLSE)
```

Why Tools?

The difference between an amateur and a professional is often mastery of the tools of the trade. If you take the time to prepare and grow comfortable with your tools when required you will be able to quickly and efficiently accomplish tasks that others consider impossible or too large to complete in the available time.

"Whatever tools you have, learn to use them. Over and over. Better and better. You'll surprise yourself if you are patient, stick to an organized schedule, and keep working at it." Sam Golob

Free Software

“Sharing of software was not limited to our particular community; it is as old as computers, just as sharing of recipes is as old as cooking. But we did it more than most.” Richard Stallman

SHARE: “It’s not an acronym. It’s **what we do.**”

Bring home the Tools!

Take home at least one tool and solve a problem. If you do this someone may actually believe you worked at SHARE. Probably not since everyone at your shop KNOWS that they only reason you come to SHARE is because “THEY HAVE AN 8 HOUR OPEN BAR AT SCIDS EVERY NIGHT!”

REVIEW

Now supports HFS files!

- REVIEW is a Quick Viewer for almost any type of data on OS/390
- REVIEW provides optionally formatted displays for SMF, LOGREC, VTOC, and more
- REVIEW is a TSO command processor and does not need ISPF
- REVIEW source code is in CBT Tape File 134 and a ready to use load module is in CBT Tape File 135. Greg Price regularly updates REVIEW and has a great collection of other useful tools as well which can be found in the same files.

REVIEW formats useful SMF information for
a quick review of recent past

System Information Tools

Several tools provide so much information they let you quickly map out an OS/390 system.

SHOWMVS

- One Stop shopping for system configuration information. The format allows you to quickly review everything on-line or in Batch.
- CBT Tape file 183 or GSF Web Site
<http://members.home.net/gsf/>
- The Source code for SHOWMVS can teach you a lot! STRING macro is EXCELLENT formatting tool for assembler programs.
- Sample output on Gilbert's Web Site
- SHOWMVS public release of development version 6.27 by Roland Schiradin on CBT Tape file 492

SHOWMVS (Short)

Operating System:

OS/390 02.06.00

CVTOSLVL: FF FF F0 00 00 00 00 00

DFSMS/MVS 1.4.0

Dynamic Linklist is supported
Dynamic LPA is available
DFSMS Loader Fork Exit is present

JES2 Level: OS 2.5.0

NJE Node: JES2MVS

DSNID: 01

Last IPL:

Date: Monday 2000-02-07 (25 days ago) Time: 19.23 Julian:
2000.038

From: S3906R/1209 NUC Id: 1 Type: Cold Start CVTUSER: 00000000
SYSPLEX name: DEVL52 SYSPLEX ID: OD OpenMVS available: YES
Timezone: W 05.00.00

SHOWMVS

SHOWMVS displays two different types of data:

- Data related to the MVS operating system
 - Operating System Release and status, Subsystems, XCF, GRS, DAE, DASD, Linkage Index (LX) Table, more...
- Data related to the current address space
 - TCB Tree, TSO Information, REXX Environment, more..

SHOWMVS can be invoked as a program, as a TSO command, or as an edit macro and can run authorized or non-authorized. Some of the displays are only produced when SHOWMVS runs authorized.

SHOWMVS many displays!

MVS LEVEL, DFP LEVEL, OSLVL FLAGS, JES2 LEVEL
IPL DATE, TIME, VOLSER, NUC-ID, CLPA, CVTUSER
Date and time of last CLPA (auth)
Time Zone, Primary sub-system name and type
Software Level: TSO/E, ISPF, DSS, HSM, RACF, VTAM, SORT,
DSF, DB2, CICS, MQ Series
Run-time Environments (CBL, PLI, FORTRAN, C/370, LE)
SMF Information: SID, JWT, data sets, exits
SMS Configuration: SCDS, system names, last update
GRS Configuration
XCF Configuration (auth)
PATH data
Coupling Facility Data
External Time Reference (ETR)
Hardware configuration
 Central Processing Complex Node Description (CPC ND)
 On-line CPUs and storage
 Performance (SU/sec, estimated MIPS)
 Service Processor data

 LPAR configuration
VM host information (auth)
VIRTUAL STORAGE MAP (CSA, SQA, LPA, etc)
SRM data (IPS/ICS/OPT, APG, etc)
WLM data (MODE, ETC)
Resource Recovery Manager (RRS)
Automatic Restart Manager (ARM)
OPEN catalogs
PAGE data sets in use
Dump data sets status and dump options
Dump data sets date, time and title (auth)
Automatically-allocated dump data sets (auth)
DAE Parameters (auth)
GTF status and options
Initialization Parameters (IPA)
Master JCL (IEEMSJCL)
Sub-system vector table with functions processed
Primary Sub-system JCL (auth)
TSO PARMLIB data (IKJTSOxx)
TSO Exits and Tables
TCAS parameters (auth)

RACF options, data sets and tables
Address space usage:
 Batch Jobs
 TSO users
 Started tasks
JES2 Initiators and corresponding jobs
Link-list data sets, with creation date
LPA-list data sets, with creation date
List of authorized libraries
Dynamic Exit Facility
Static system symbols
LLA parameters and managed libraries (auth)
ACTIVE LPA QUEUE
SVC Table with name of the corresponding module
T1, T2, T3 and T6 ESR tables
Linkage Index (LX) Table (auth)
Program Properties Table (PPT) (auth)
I/O Appendage Table
Resource Manager List (IEAVTRML)
Device Classes and corresponding unit names
On-line devices, with unit-name, VOLSER, owning j
ob,use attribute, storage group
System consoles, with status & Routcde list
Message Processing Facility (MPF)
Command Prefix Table (CPFT)
Device Allocation Defaults (ALLOCxx)
Addresses of selected global control blocks
JCL information for current JOB/STEP
RACF profile (from ACEE)
TSO profile (from PSCB & UPT)
REXX environments, host cmd tables and func pkg
directories
Allocated Data sets (from TIOT, SWA, TCT)
TCB tree and PRB chain
Attention Routines
Enhanced view of the JPAQ and Load-lists
Recovery exits and timers
Addresses of selected local control blocks

MXI

- MXI (MVS eXtended Information) is an ISPF-based application that enables the MVS Systems Programmer to display important configuration information about the active MVS system.
- Although primarily used online, MXI can be run in batch and also has a REXX interface.
- Most of the displays can be filtered using ISPF-like masking characters and many display fields are 'point-and-shoot'.
- Some displays only available if MXI is authorized
- MXI is very easy to install **OCO**

Where to get it?

CBT Tape Files 409, 410 (Rob also has MORE utilities on file 411) or

- Uses IBM Common Storage Tracking Data (PARMLIB DIAGxx)
- Same information as RMF III and OEM MVS Monitors

SHOWMVS vs. MXI

- Different but both have unique strengths. I use both!
- Both are updated frequently so stay current to have access to the latest features and information specific to the most recent OS/390 releases.

TASID System Information and more

TASID (pronounced tas-eye-dee) is a program that provides, among other things, information on system configuration, what is running on an OS/390 system (jobs, users, tasks, etc), ENQ contention information, current ENQs, Initiator information (JES2 only), DASD Space information, Allocated DD names, and storage displays. It is one of the most requested tools available on IBM's internal MVSTOOLS repository.

It is a free tool supplied by IBM in **OCO** format.

- ISRDDN now includes many featured first seen in TASID
- TASID is very easy to install and is never APF authorized

The most current copy of TASID and many other useful Tools and Toys from Doug Nadel are always available through the web at

<http://www.mindspring.com/~somebody/>

TASID Current Dataset Allocations

- Compares to PDS LISTA screen but with less commands
- Detects common problem of mixed DSORG(s) under one ddname
- Provides a few basic commands to Browse, Edit, Compress, Free or perform some other simple functions with data sets already allocated to your session
- APF, LINK LIST, and LPA LIST libraries can be added to this list by command
- Data sets can be searched for members and the search can be restricted to a ddname

- File Manipulation

TAPEMAP

The tape mapping program called TAPEMAP supplied as source on file 299 of the CBT tape, is widely used. It includes special support for mapping the CBT Tape and other common file formats. *64k blocksize supported by latest update.*

Does not require BLP but BLP allows you to analyze a volume without changes to JCL or any prior knowledge of that tape volume.

Leonard Woren's web page

<http://www.best.com/~ldw/mvs>

has his original version of
TAPEMAP. **oco**

```
//TAPEMAP EXEC PGM=TAPEMAP,REGION=6M
//SYSUDUMP DD SYSOUT=*
//SYSPRINT DD SYSOUT=*
//SYSPRNT2 DD SYSOUT=*
//SYSUT1 DD DISP=OLD,
// DSN=MOUNT.TAPE,
// LABEL=(,BLP,EXPDT=98000),
// UNIT=3490,
// VOL=SER=(TAPEIN)
```

TAPEMAP sample output

COPYMODS

The tape copying program called "COPYMODS" on file 229 of the CBT tape, is useful for making byte-for-byte copies of the CBT tape, and other tapes. Up to 10 copies may be made at one time.

COPYMODS is very reliable and is the recommended program for making copies of the CBT Tape.

Normal use requires BLP privileges.

Updated by Sam Golob for 64k blocks and serious tape label manipulation!

COPYMODS JCL

```
//*  
//* COPYMODS IS A FREEWARE TAPE COPIER WHICH CAN CREATE  
//* MULTIPLE COPIES OF A TAPE IN A SINGLE PASS. IT CAN USE  
//* UNLIKE DRIVES FOR INPUT AND OUTPUT E.G. 3480 <<--> 3490  
//*  
//* WARNING!!!! THIS WILL OVERWRITE ANYTHING YOU PUT IN THE  
//* OUTPUT DRIVE.  
//*  
//COPY EXEC PGM=COPYMODS,REGION=6M  
//STEPLIB DD DISP=SHR,DSN=IBMUSER.LOAD  
//SYSPRINT DD SYSOUT=*  
//IN DD DSN=IBMUSER.INPUT.TAPE,DISP=OLD,LABEL=(,BLP),UNIT=3490,  
// VOL=SER=INPUT  
//OUT1 DD DSN=IBMUSER.WRITE.TAPE1,UNIT=3480,VOL=SER=OUTPU1,  
// LABEL=(,BLP,EXPDT=98000),DCB=TRTCH=COMP  
//OUT2 DD DSN=IBMUSER.WRITE.TAPE2,UNIT=3480,VOL=SER=OUTPU2,  
// LABEL=(,BLP,EXPDT=98000),DCB=TRTCH=COMP
```

TAPESCAN Tape Analysis and Copying Program

TAPESCAN is found on CBT Tape File 102 with a load module on File 035.

Provides useful measure of “Total Bytes Read”

Map of contents

LIST parameter includes preview of each file in output

COPYFILE

```
//COPYPSTEP EXEC PGM=COPYFILE,REGION=4000K,PARM='TAPEL'  
//MSG DD SYSOUT=*  
//TAPELOUT DD SYSOUT=*  
//SYSUDUMP DD SYSOUT=*  
//IN DD DSN=INPUT.FILE,UNIT=TAPE,DISP=SHR,LABEL=EXPDT=98000,  
// VOL=SER=vvvvvvv  
//TAPELIN DD DSN=OUTPUT.FILE,  
// UNIT=( &UN2 , ,DEFER) ,VOL=( ,RETAIN, SER=vvvvvvv) ,  
// DISP=(NEW,KEEP) ,LABEL=EXPDT=98000 ,DCB=TRTCH=COMP
```

- Copy and reorder files
- Used as part of the process to create a new CBT Tape
- Found on CBT Tape File 316 in source and a load module on CBT Tape File 35

CBT Tapes

- CBT Tape on 3480 tape cartridge w/ IDRC
- Unload File 1 using IEBGENER for documentation on the contents and advice on getting started finding useful tools on the tape.

Web Tour - IBM Redbooks

IBM has released a new Redbook series entitled the

"ABC's of Systems Programming" and is a

"five-volume set that is designed to introduce the structure of an OS/390 and S/390 operating environment. The set will help you install, tailor, and configure an OS/390 operating system, and is intended for system programmers who are new to an OS/390 environment."

Check out **IBM Redbooks** at <http://ibm.com/redbooks> or:

- Volume 1 <http://www.redbooks.ibm.com/abstracts/sg245597.html>
- Volume 2 <http://www.redbooks.ibm.com/abstracts/sg245852.html>
- Volume 3 <http://www.redbooks.ibm.com/abstracts/sg245853.html>
- Volume 4 <http://www.redbooks.ibm.com/abstracts/sg245654.html>
- Volume 5 <http://www.redbooks.ibm.com/abstracts/sg245655.html>

On-Line Computer Dictionaries

I find this one
handy too

<http://www.dictionery.com/>

Freeware Formats and Sources

- Many traditional distribution channels for the exchange for free software are no longer being maintained.
- Free software updates now must also be obtained from the Internet.
- Formats for software delivery on the Internet vary from those which long time users of S/390 free software may be familiar.

Internet Formats

- ZIP
- ZIP is standard for compression in most of the non-unix world
- Commercial ZIP utilities on PC such as PKZIP <http://www.pkware.com> or WinZIP <http://www.winzip.com>
- Info-ZIP is a freeware utility available at <http://www.cdrom.com/pub/infozip/Zip.html> for a large number of platforms including native OS/390 and OS/390 USS
- XMIT
- Using the TSO XMIT command is a convenient way to package data into standard FB records for safe transmission of the internet
- XMIT + ZIP
- XMIT packaged data sets which are then compressed with a ZIP utility such as PKZIP work especially well and are becoming a popular choice to distribute MVS software over the internet
- ASCII vs. EBCDIC

How to download and restore typical XMIT + ZIP

Frequently files are packaged on MVS for transfer using the TSO transmit (XMIT) command to transmit them into a data set. This is done to turn PDS(s) and other odd files into nice FB 80 files which will FTP nicely to PC and UNIX systems. These files are downloaded to a PC and then compressed with PKZIP to reduce the size since disk space is limited and most people have limited bandwidth to download. The convention of files suffixed .XMI packaged in XMIT format is becoming common.

Download *name.ZIP* file to PC as using your web browser or an FTP client.

How to download and restore typical XMIT + ZIP

Extract *name.XMI* or *name.DAT* file from *name.ZIP* file on PC . You will need a small utility program to do this.

Commercial Unzipping programs like PKZip from Pkware <http://www.pkware.com> and WinZip from NicoMac <http://www.winzip.com> are excellent tools.

Freeware Unzipping programs are almost as good and many can be found by searching PC Freeware web sites such as [NoNags http://www.nonags.com](http://www.nonags.com) .

For Windows EnZip is a good one you can download from <http://www.cpam.freemove.co.uk>

How to download and restore typical XMIT + ZIP

Upload *name.XMI* files to MVS using a **binary** file transfer method (no CRLF or ASCII translation) and that the MVS dataset created is LRECL=80,RECFM=F,DSORG=PS Note that you can upload into a PDS if you want as long as it is FB80.

Receive the *name.XMI* file on MVS

Issue command: TSO **RECEIVE INDATASET(*name.XMI*)**

When prompted by message "INMR906A Enter restore parameters or 'DELETE' or 'END' +":

Enter: DA(*name.of.your.library*) UNIT(*unit*) VOLUME(*volume*)

Note: The UNIT() and VOLUME() operands are optional but shown in case your installation puts RECEIVE files on work packs by default like mine does

Trouble Downloading

- If you are having trouble downloading try to find out if you are behind a firewall. If you are behind a firewall and you cannot get your network folks to configure it to allow you to download using a web browser try getting an FTP client like the free Blue Zone FTP or WS_FTP that has a few firewall friendly options (PASV mode) that might help. Failing that download from home and email yourself the files or bring them in on a floppy as most are not that large.
- More hints at <http://www.cbttape.org/download%20trouble.htm>

Xmit Manager

What is Xmit Manager?

Xmit Manager is a Free Windows based utility which decodes IBM Mainframe based Xmit files and allows for viewing or extraction of the content data.

Supports PDS, SEQ content, FTP to MVS or Internet, Zipped files. Written by Neal Johnston-Ward

It is on the CBT CD & Web Site too!

Xmit Manager Home Page

<http://www.data-aid.co.uk>

PDS Magician!

Patrick Allmond's freeware utility allows you to examine the contents of a TSO/E XMIT file on your Windows PC.

- Download it from <http://www.atbsconsulting.com/magician.htm>
- Written in Visual Basic
- First public release February 2000
- Future enhancements will follow

You may also be interested in David Alcock's "UnXMIT Information Page" at

<http://www.planetmvs.com/UnXMIT/index.html>

Hercules - What is it?

- Hercules is a System/370 and ESA/390 emulator which can IPL and execute S/370 and ESA/390 instructions. It can also emulate CKD and FBA DASD, printer, card reader, tape, channel-to-channel adapter, and local non-SNA 3270 devices.
- Currently runs under Linux or Windows
- Capable of running MVS/ESA, OS/390, VM/ESA, VSE/ESA and older Operating Systems such as MVT, MVS 3.8 and VM/370
- Refer to Session 2880 in the proceeding “370/390 Emulation Under Linux with the Hercules Emulator: MVT Lives!” presented here in Long Beach
- Included on the CBT CD or download from the Internet

Where to get **FREE** software?

CBT

CBT Tape Home Page <http://www.cbttape.org>

- Download CBT Tape, CBT Overflow Tape, Pending updates to the CBT tape and other freeware collections. The files are stored primarily as XMIT + ZIP and when restored properly preserve all the original MVS attributes. No special user id's or memberships are required to download or to upload contributions.
- Free email list you can sign up for to receive notifications about updates to the CBT Tape and other interesting MVS Freeware.

Where to get FREE software?

NaSPA - <http://www.naspa.net>

- Membership in NaSPA is required to access the download area. NaSPA members receive a CD-ROM annually which normally includes the current CBT Tape when the CD-ROM is prepared.

NaSPA: World-wide not-for-profit
Network and Systems Professionals Association
for enterprise computing professionals; publishers
of Technical Support Magazine.

Melinda Varian's Page <http://pucc.princeton.edu/~melinda>

(Paper VM and the VM Community: Past, Present, and Future, and more!)

What is a mailing list and how do I find mailing lists?

- A mailing list is a free service you subscribe to that allows you to exchange email with others on a topic of mutual interest. For more information check out popular resources like Internet For Dummies®

ISBN: 0-7645-0700-1.

- There are several catalogs of lists available on the web.

- My list <http://www.knutson.org/internet.htm>
- Catalog of LISTSERV lists <http://www.lsoft.com/lists/listref.html>
- Catalog of many lists including some other list servers i.e. majodomo, listproc, and listserv. <http://www.liszt.com>

Mail Lists

“To sum it all up, SHARE is now 365 days a year rather than 4 times a year.” Melinda Varian in “VM and VM Community: Past, Present, and Future” speaking about VMSHARE. VMSHARE is gone but lives on in spirit in the discussion groups which stretch across the globe using the Internet.

Mailing Lists

- Almost everyone knows how to send email so networking through email is a natural use for the Internet.
- A big part of networking is finding other people interested in the same things you are especially those who might be willing to help you. Mailing lists help people interested in the same thing exchange email.

What is a mailing list and how does it work?

- A mailing list works by allowing people to join the and then send a single email message that is relayed to all the list members. Responses to messages are also relayed to all list members.
- A list server program does the work of keeping track of list members and relaying the email messages. A real human being administers the list server and helps to resolve problems

Who runs a mailing list and Why?

- A real human being can run a mailing list by hand but computers run most and those are the ones I am going to talk about.
- A mailing list is normally created to facilitate discussion related to a particular topic.

Will you give me an example?

- YES!
- The mailing list I am going to use for my examples is the IBM-MAIN mailing list.
- IBM-MAIN is the IBM Mainframe Discussion List and is a very active mailing list frequently getting more than 150 messages a day.

How does it work?

- There are two email addresses associated with a list server. The list server has an address to which you send commands which normally takes the form `LISTSERV@list` i.e. `LISTSERV@BAMA.UA.EDU`
- The list has an address that you use when you want to send a message to everyone who is a list member which normally takes the form `listname@list` i.e. `IBM-MAIN@BAMA.UA.EDU`

How do I join a mailing list?

- To join a LISTSERV mailing list you start by sending the list server an email message asking to be subscribed with the text "subscribe listname Joe User"

How do I join a mailing list?

- So to join the IBM-MAIN mailing list I send a message like this one:

To: LISTSERV@bama.ua.edu

From: Sam Knutson <sknutson@cbttape.org>

Subject: listserv

subscribe ibm-main Sam Knutson

How do I join a mailing list?

- The listserv sends back a message to the email address which is being signed-up and asks for confirmation that you want to be subscribed. This is a simple control to prevent someone from signing you up for email you don't want

How do I join a mailing list?

Command confirmation request

Date: Wed, 17 Feb 1999 17:09:29 -0600

From: "L-Soft list server at U of A (1.8c)" <LISTSERV@BAMA.UA.EDU>

Subject: Command confirmation request (477D8A)

To: Sam Knutson <sknutson@CBTTAPE.ORG>

Your command:

SUBSCRIBE IBM-MAIN Sam Knutson

has been received. You must now reply to this message (as explained below) to complete your subscription. The purpose of this confirmation procedure is to check that the address LISTSERV is about to add to the list for your subscription is reachable. This is a typical procedure for high-volume lists and all new subscribers are subjected to it - you are not being singled out. Every effort has been made to make this verification as simple and painless as possible. Thanks in advance for your cooperation.

(CONTINUED ON NEXT PAGE)

How do I join a mailing list?

Command confirmation request

To confirm the execution of your command, simply reply to the present message and type "ok" (without the quotes) as the text of your message. Just the word "ok" - do not retype the command. This procedure will work with any mail program that fully conforms to the Internet standards for electronic mail. If you receive an error message, try sending a new message to LISTSERV@BAMA.UA.EDU (without using the "reply" function - this is very important) and type "ok 477D8A" as the text of your message. Finally, your command will be cancelled automatically if you do not confirm it within 48h. After that time, you must start over and resend the command to get a new confirmation code. If you change your mind and decide that you do NOT want to confirm the command, simply discard the present message and let the command expire on its own.

What next?

- The listserv will wait for you to reply before actually putting you on in the mailing list. I do want to subscribe so I send back the message it directed me to.

To: LISTSERV@bama.ua.edu

From: Sam Knutson <sknutson@cbttape.org>

Subject: Re: Command confirmation request (477D8A)

ok

Joined at last!

The listserv will now send back two email messages. Any time you send the listserv a command it sends you a summary about the execution of that command. This is what I call the geek message i.e.

```
> ok
```

```
Confirming:
```

```
> SUBSCRIBE IBM-MAIN Sam Knutson
```

```
You have been added to the IBM-MAIN list.
```

```
Summary of resource utilization
```

```
-----
```

```
CPU time: 0.020 sec
```

```
Overhead CPU: 0.010 sec
```

```
CPU model: Ultra-Enterprise (1024M)
```

Welcome to the list

- The welcome message is a lot more friendly and informative i.e.

Date: Wed, 17 Feb 1999 17:11:21 -0600
From: "L-Soft list server at U of A (1.8c)"
<LISTSERV@BAMA.UA.EDU>
Subject: You are now subscribed to the IBM-MAIN list
To: Sam Knutson <sknutson@CBTTAPE.ORG>
Reply-To: IBM-MAIN-request@BAMA.UA.EDU

Wed, 17 Feb 1999 17:11:21

Your subscription to the IBM-MAIN list (IBM Mainframe Discussion List) has been accepted.

Please save this message for future reference

Digest

The IBM-MAIN list gets 100 - 200 messages each day. Digest delivers a days worth of messages concatenated in one large daily email.

To: LISTSERV@bama.ua.edu

From: Sam Knutson <sknutson@cbttape.org>

Subject: listserv

set ibm-main digest

\$HASP000 OK

The listserv once again sends me back a message showing that it executed my command and the resources used i.e.

Date: Thu, 18 Feb 1999 06:43:38 -0600
From: "L-Soft list server at U of A (1.8c)" <LISTSERV@BAMA.UA.EDU>
Subject: Output of your job "sknutson"
To: Sam Knutson <sknutson@CBTTAPE.ORG>

> set ibm-main digest

Your subscription options have been successfully updated. Here are the exact settings now in use for your subscription. Please take a few moments to check that this is indeed what you wanted.

Subscription options for Sam Knutson <sknutson@CBTTAPE.ORG>, list IBM-MAIN:

DIGEST You receive list digests, rather than individual postings

MIME You prefer to receive messages in MIME format

FULLHDR Full (normal) mail headers (formerly "FULLBSMTP")

NOREPRO You do not receive a copy of your own postings

NOACK No acknowledgement of successfully processed postings

Subscription date: 17 Feb 1999

Summary of resource utilization

CPU time: 0.010 sec

Overhead CPU: 0.010 sec

CPU model: Ultra-Enterprise (1024M)

Mail List Options

- I also followed up by sending another message to select the ACK and REPRO options since I like a “warm fuzzy” feeling that my posts went through. You can send multiple set commands in one email just put each on a new line.
- It is also a good idea to set the CONCEAL option for lists that support it.

IBM-MAIN

- You can also read and search on past messages on IBM-MAIN at the web archives without joining the list. This is a fabulous research tool easily as valuable as IBMLink even for those who do not care to follow the list antics on a daily basis.

<http://bama.ua.edu/archives/ibm-main.html>

Hold the mail I am taking a vacation

- If you want to temporarily halt email from IBM-MAIN you can use the SET NOMAIL command i.e.

To: LISTSERV@bama.ua.edu

From: yourname

Subject: listserv

`set ibm-main nomail`

Resume Delivery

- to reverse this you just send another message

To: LISTSERV@bama.ua.edu

From: yourname

Subject: listserv

set ibm-main mail

Posting

Just send an email to the list..

To: IBM-MAIN@bama.ua.edu

From: yourname

Subject: How do I enable SMS data set stripes?

.....

Soon you may receive lots of helpful replies! A caveat is that once you stop lurking and decide to post you reveal your email address to everyone on the list and on UseNet (which is LOTS of people). You may receive unsolicited junk mail some of which may be offensive to you. This is often called SPAM. You can use services like HotMail or Juno to create throwaway accounts from which to post messages.

Searching Archives

Just send an email to the LISTSERV

To: LISTSERV@bama.ua.edu

From: yourname

Subject: CMD

search ibm-main IEA602I

The reply will include snips of the postings and a set of GETPOST commands you can use to retrieve the full text of all the postings. For advanced options see the INFO-CARD described in the welcome message. The archives can also be searched from the web.

Stop the “email” I want to get off!

- If you decide you want to unsubscribe it's easy to do. Send the following

To: LISTSERV@bama.ua.edu

From: yourname

Subject: listserv

signoff ibm-main

Ms. Manners on “Netiquette”

- Mailing lists just like any other social organization have an etiquette all their own. You will pick it up pretty quickly but here are a few tips.
- A good web site dedicated to Net etiquette is <http://www.etiquette.net> which includes links to the complete on-line copy of book *Netiquette* by Virginia Shea
- DO read others posts for a week or two to get the flavor of the list before trying to post anything yourself. The list got along fine for years without your help it can get along for at least another week.
- DON'T ever send an attachment to the list.
- DON'T forward off-topic email like jokes or the latest hoax email chain letter to the list i.e. WARNING DO NOT OPEN ANY EMAIL WITH THE SUBJECT _____
- A good site for information on hoaxes is <http://www.vmyths.com> Also most of the major Anti-Virus sites provide some information on hoaxes.

Ms. Manners on “Netiquette”

- DON'T send commands for the LISTSERV to the list. Be sure you send SET xxxx, SIGNOFF xxxx to LISTSERV@listaddress
- DON'T respond to inappropriate messages i.e. listserv commands and all the others things you know better than to send to the list. The only thing worse than reading a useless post is reading a useless post and 20 replies. The list manager will take care of this type of thing if it is really a problem. If you absolutely have to say something respond to the person's private email not to the list.
- DO send PLAIN text email to the list not Rich Text or HTML. Many people use email programs which don't display this type of content and it appears as useless attachments or garbage to them. Microsoft Outlook and Microsoft Exchange are two programs which frequently send Rich Text mail without the send being aware.

Avoid Out of Office Reply to List

Your email message RE: "Re: Storage not released at end of JOB ..." addressed to John Smith has been successfully delivered.
John Smith is currently out of the office and will SOON return on 01/16/2000

Message: I am currently on an assignment in CSC Frankfurt , please mail me at jsmith2@biz.com

A copy of your email has been delegated to: jsmith2@biz.com;

Turn off WINMAIL.DAT in Microsoft Exchange

A good way to annoy people is to repeatedly fill their mailbox with the useless WINMAIL.DAT attachments that Microsoft Exchange insists on including. Email sent from Exchange to a non-Exchange mail reader may contain an Attachment called WINMAIL.DAT. If you use Exchange, you won't see this file, and the message will retain its formatting. However, it can be confusing for those who don't use Exchange (the majority of the Internet population), and have no use for this file. Here's how to turn it off:

Step #1: Double-click on the Mail and Fax icon in Control Panel. Click on the Services tab, and select Internet Mail from the list. If Internet Mail is not listed, click Add to add this service. Click Properties, and then Message Format. Turn off the option that reads Use MIME when sending messages. Click OK and then OK again.

Turn off WINMAIL.DAT in Microsoft Exchange II

Step #2:

Double-click on the name of each recipient in your Address Book.

Turn off the option that reads Always send to this recipient in Microsoft rich-text format. This option needs to be set for each recipient of a message - if even one has this turned on, all recipients will still get the attachment.

Note: Either of these methods should work for most users, but sometimes nothing seems to work. If you plan to be sending lots of internet email, you might consider using a mail program such as Eudora. Information on the free Eudora Light and commercial Eudora Pro can be found at <http://www.eudora.com>

This information is based on a message from Wilson Smith which you can read at: <http://www.xnet2.com/patti/archives/9608/msg00962.html>

Great Site for
CICS folks!

Google™

Google™ groups is a web site which allows you to read newsgroups with a web browser instead of using special newsreader software and finding a news server.

Google™ Groups <http://groups.google.com>

In order to post messages to many of the lists through these sites you still need to subscribe to the mail list and set to “nomail” if you don’t want email.

Deja™ and RemarQ™ Gone

Deja™ and RemarQ™ were web sites which also provided the capabilities now available through Google™ groups. Google™ acquired Deja™ and RemarQ™ closed down.

Deja™ had collected Usenet Archives dating back to 1995 and these will eventually be searchable at Google™.

- FWIW - For What Its Worth
- ISTR - I Seem To Remember

Who me? Contribute to the CBT Tape or CD-ROM? Why not!

Send contributions to the CBT Tape to Sam Golob and call or email him. Send contributions only suited for the CD-ROM to Sam Knutson.

Most contributions are now made via email over the Internet. To contribute, it is preferred that you make a PDS on an MVS system, including documentation member(s), put the pds into TSO XMIT OUTDSN format, download it in binary to the PC (if you need to), and attach it to an email to Sam at: sbgolob@attglobal.net

If the file is large, you can PKZIP it on the PC, before attaching it to the email. That's all there is to it!

If you want to send anything any other way, Sam Golob's address is:

Sam Golob, P.O. Box 906, Tallman, NY 10982-0906 USA
